Zyvor Fabric

Admin Basics

2026-08-29

Ports / access

Port	Service
9095	Daemon / API
3000	Vite UI (dev)

Auth

External OIDC + JWT bearer.

JWT secret and admin password

Both are auto-generated (cryptographically random, 64 chars) on first start if unset, and persisted to disk so they survive restarts — never a hardcoded or predictable default:

Env var	Default when unset	Persisted at
ZYVOR_FABRICD_JWT_SECRET	Random, generated once	/var/lib/zyvor-fabricd/.jwt_secret (mode 0600)
ZYVOR_FABRICD_ADMIN_PASSWORD	Random, generated once — never defaults to admin	/var/lib/zyvor-fabricd/.admin_password

Retrieve the generated admin password:

```
cat /var/lib/zyvor-fabricd/.admin_password
```

Set your own at deploy time instead by exporting the env var before first start — once a value is persisted to disk, it's reused across restarts even if the env var is later unset, so set it before the very first run if you want a specific value from day one.

Install sketch

Follow the product README and deploy/Helm docs in the repository. Verify health endpoints or CLI status before opening the UI.

- [Getting Started](#)

Operate from the console (UX)

1. Open this route from the nav or command palette and wait for live API data.
2. Use filters/search when present; drill into a row for detail.
3. For mutating actions: confirm role gates and impact before applying.
4. **Empty / fail:** Check service health, auth, and that required CRDs/backends for this domain are installed.
5. **Success:** Live data loads; created/updated objects appear without error toasts.
